Exceptional Accuracy for Reliable Field Measurement

The Bird line of Wideband Power Sensors are designed specifically for worry-free field use. The WPS line never requires field calibration giving technicians confidence in field measurements. Using exceptionally accurate measurements of True Average Power, Peak Power, and Duty Cycle directly with exceptional accuracy the WPS can calculate a wide range of other important factors such as VSWR, Return Loss, Reflection Coefficient, Crest Factor, Average Burst Power, and CCDF.

Factory calibration is only required once per year and is traceable to the National Institute of Standards and Technology (NIST), providing additional confidence in sensor measurements.

Accurate in-line field
measurement that never
requires field calibration
