Do you use a base station simulator to reproduce any of the world's communications systems on the workbench?

yes

10

Do you have a hard time preparing complex measurement scenarios?

Do you know any complex measurement scenarios that are required for most base station simulators?

Does your base station simulator meet the latest communications standards?

10

Q.3

Q.3

yes

Does your base station simulator meet the existing communications standards?

Here's the Base Station Simulator It Answers All Your Questions.

Reproduce the world's communications systems in a small workbench.

As mobile terminals, such as smartphones, become increasingly high performance and diversified to enhance the user experience, carriers are starting to deploy LTE-Advanced technology as the next stage after LTE in speeding-up networks and meeting the needs of smartphone users. Additionally, the automotive world is pushing forward with new innovations, such as the connected car and self-driving vehicles, based on wireless communications technologies.

The Signalling Tester MD8475A/MD8475B is a base station simulator reproducing communications between base stations and UEs. It supports the full range of communication standards including LTE, and the Anritsu SmartStudio user interface, eliminates the need to create complex test scenarios, assuring efficient tests of complex UEs.

POINT 1

Scenario-less Mobile Phone Function Tests using SmartStudio

Supports Versatile Smartphone Tests

Complex tests of multifunction smartphones are supported by the all-in-one MD8475A/MD8475B with interactive SmartStudio interface.

.....

11

POINT 2Automated Confirmation of Existing Mobile Functions using SmartStudio

SmartStudio Manager helps improve development efficiency by automating checks of existing functions at UE development, such as Voice, SMS send/receive, and other tests.

POINT 3 All-in-One Support for LTE and Other Communications Systems

All the world's main communications technologies, such as triple-system LTE/W-CDMA/GSM mobiles and TD-LTE/TD-SCDMA/GSM as well as LTE hybrids, can be tested using the all-in-one MD8475A/MD8475B. (Requires installation of optional units and software for each systems).

12

Configuring Multi-cell Test Environment

Performing UE tests between communications systems (handover tests) usually requires set-up of several measuring instruments and creation of complex scenarios. SmartStudio eliminates these problems by providing a simple test environment for fast and efficient testing.

Multi System Configuration

Roaming and power consumption tests of UEs require multi-cell connections.

The MD8475A supports dual-RF tests. And MD8475B supports up to 8RF tests.

The SmartStudio GUI makes it easy to set multi-system test environments, especially for the latest Carrier Aggregation (CA) wireless standards.

2-cell Testing Support by SmartStudio (MD8475A)

Multi-cell Test Configurations

Tests of UEs moving between cells take the Selection, Redirection, Handover, and other conditions into consideration, depending on the UE and base station conditions. SmartStudio can register these UE and base station conditions, including the RF power, as a test case, making it quick and easy to evaluate UE behaviors and reproduce failures. Test cases are also useful for general UE evaluations when reproducing Handover failures.

Tel Car Min- (HIMM in (HOMM induition and in	1000
Acherologie Acher	Control (1) Control (1) Control (1) Control (1)

Small-cell Switching Tests

Macrocell, small-cell, and femtocell base stations are being installed to provide wide coverage for people moving freely between base stations; SmartStudio provides easy test sequences for preferential capture of small-cells.

*****: Two MD8475A units are required.

Simple Throughput Test Environment (MD8475B)

Throughput testing until now

- It needs to be adjusted for each application about radio layer settings and server settings.
- Performance depends on the PC specification and the load of Ethernet.

SIM Connectivity Test

Dual SIM Dual Standby (DSDS) and Dual SIM Dual Active (DSDA) tests of dual-SIM UE can be performed using two sets of MD8475A/ MD8475B. Additionally, Single SIM Dual Standby (SSDS) and Single SIM Dual Active (SSDA) of single-SIM UE can be performed using one MD8475A/MD8475B. These test environments can be fully automated using SmartStudio Manager.

Test Example:

The power consumption and throughput of a dual-SIM UE can be confirmed while the UE is making a voice call using SIM1 and transferring packet data using SIM2.

Throughput testing using MD8475B

- Single GUI supports to adjust for each application about radio layer settings and server settings.
- Performance is independent from PC specification and the load of Ethernet.

For the transmission and reception of the UE, use iPerf application which is widely used for throughput testing.

Data Packet Communications

Data packet communication environments are complex, but SmartStudio makes it easy to resolve troublesome packet bottlenecks, shortening evaluation times.

Versatile Server Environment

Because the MD8475A/MD8475B pre-installs Windows 7, commercial application servers can be easily installed.

Status Evaluation

A full line of function tools can be used to check communication status, including throughput, ACK/NACK counts, and RF monitoring. Simultaneous checking of multiple layers allows quick troubleshooting during data communications.

Genuine Application Test Environment

Connecting the MD8475A/MD8475B to the Internet supports Web application tests using UEs under development to verify actual in-use power consumption and throughput before market release.

Voice Call Evaluation Environment

The need for voice-call evaluations has not changed even with the spread of LTE services. However, some voice-call test items, such as the access barred condition and emergency calls, are not easily evaluated on live networks. SmartStudio supports comprehensive evaluation of UE under high-load conditions, such as testing of simultaneous voice calls and other functions.

3G/2G Voice Calling Test

Just making voice settings using SmartStudio is all that is necessary for voice tests with the MD8475A/MD8475B.

Multimedia Interface Software MX847508B

Setting Roaming and Registering Address Book

When performing incoming-call tests of W-CDMA/GSM UE, SmartStudio can display any of 'Public', 'National', 'International', and 'Unknown' on the UE. Additionally, when the incoming call number matches a preregistered number in the address book, the name associated with the number is displayed.

Setting Identify Type

When performing incoming call tests of W-CDMA/GSM UEs, either IMSI or TMSI can be chosen for the UE Caller ID using Paging.

Voice Call Evaluation Environment

Voice over LTE Tests

RLC/PDCP Mode AM

FLC SN Field Length 10bt

GoS

Since LTE uses the data network, Voice over LTE (VoLTE) communications also use the data network; SmartStudio simplifies VoLTE tests.

Loopback Tests of VoLTE/Video

The SmartStudio CSCF function supports VoLTE tests (AMR/W-AMR Codec, etc.) in the loopback mode.

In addition to an IMS server, VoLTE tests require a variety of LTE settings about multi-PDN. Not only does SmartStudio support multi-PDN^{*1}, but it it also supports packet filter and QoS settings. Additionally, loopback audio data can be changed using the RTP function.

At VoLTE loopback testing, as well as looping voice data sent to the terminal from the network back from the terminal, the voice data can be changed to the MUTE status or to a fixed pattern to perform communications quality tests and battery consumption measurements requiring good reproducibility.*²

End-to-End Tests of VoLTE and Video Call

Voice over LTE can be tested between two LTE UEs in both directions using two MD8475A units to benchmark and evaluate calls between actual UEs.

*****1: GSM and TD-SCDMA are not supported.

· PDCP SN Reid Length 1264

- *2: Requires MX847570A-086 or MX847570B-086.
- *3: RoHC settings require the MX847550A-060 or MX847550B-060 option. The RTP/VDP/IP (0x0001) and UDP/IP RoHC (0x0002) profiles are supported.

Sets RoHC*³ and TFT filter at Default Bearer and Dedicated Bearer

Voice Call Evaluation Environment

Testing Voice Calls from LTE to 3G/2G

A variety of technologies are used when a UE moves between systems from an LTE to 3G/2G cell. Configuring a 2-cell test environment using SmartStudio supports LTE and 2G/3G system voice call tests such as CS Fallback and SV-LTE (Simultaneous Voice and LTE).

SMS Tests

SMS and MMS are popular messaging services used worldwide. Exchanges between UEs as well as the number of verification items are both increasing because more direct control of UE is being attempted now.

Sending/Receiving SMS Text Messages

SmartStudio has a dedicated SMS server supporting sending and receiving of SMS messages at any PS or CS network setting. Multiple SMS messages can be preregistered for continuous sending and CBS messages can be sent too.

Sending Binary SMS

The MD8475A/MD8475B can send binary messages as SMS supporting remote control of the UE. Additionally, general evaluations, such as behavior when receiving an SMS during a voice call, can be evaluated to help prevent problems occurring in the field.

IMS Service Tests

SmartStudio has a built-in standard server environment for running IMS server functions for easy service tests, including VoLTE, SMS over IMS, etc.

SIP Registration of a Non-IMS UE

Typical Connection Procedure

- 1. PS Attach: Connect to Data server.
- \rightarrow Get address using DNS, etc.
- 2. SIP Regist:
- \rightarrow Depends on application.
- \Rightarrow One PDN is required.

Standard IMS Server Function

CSCF (Call Session Control Function)

Supports standard server function for VoLTE and SMS over IMS tests as well as voice data loopback function. IPsec is supported too.

DHCPv6 (Dynamic Host Configuration Protocol v6)

Allocates IPv6 address and notifies DNS/SIP server address to network node.

DNS (Domain Name Server)

Operates as DNS cache server.

NDP (Neighbor Discovery Protocol)

Supports function to transmit RA (Router Advertisement) and periodically transmit RA to RS (Router Solicitation).

NTP (Network Time Protocol)

The UE and MD8475A times are synchronized by sending time data in response to an NTP request.

PSAP (Public Safety Answering Point)

The UA (User Agent) and voice data loopback function support PSAP simulation for running IMS Emergency tests.

XCAP (XML Configuration Access Protocol)

This function supports updating, referencing, and deleting of XML format file data (XCAP documents).

SIP Registration of an IMS UE

Typical Connection Procedure

1. IMS Regist: Connect to CSCF server using SIP.

2. Data Communication: Connect to Data server.

 \Rightarrow Consequently, two or more PDN required.

SMS over IMS Setting

UE can register with CSCF server, and can transmit and receive SMS over IMS.

CSCF Address:	anritsu-cscf.com	Sign In
CSCF Port:	5060	Close
SMSC's SIP-URI:	sip 2222@anritsu-cscf.com	-
User's SIP-URI:	sipuser@anritsu-cscf.com	-
Status:	Off	

Ping Sending Function

The Ping sending function is used to verify the connection of the device under test to the network.

Extended CSCF Option MX847570A-080/MX847570B-080

Various conditions can be set for VoLTE/Video quasi-normal and abnormal tests. Moreover, VoLTE call and hang-up sequences can both be confirmed from SmartStudio. In addition, VoLTE/Video audio codec switchover tests are supported as well.

Virtual UA Calling/Release

VoLTE calling from the SmartStudio simulated UE (Virtual UA) is supported. In addition, any Virtual UA response can be set.

Network Fault

The occurrence of a server or network fault can be created.

Message Blocking

Ignore and Reply responses to specific messages can be changed arbitrarily.

Multi-P-CSCF Settings

Up to three types of P-CDCF addresses can be notified to UE by one PDN to confirm correct UE operation for multiple addresses.

Voice Codec Switchover

Any codec can be sent from the MD8475A/MD8475B to the UE, and switchover tests, such as VoLTE \rightarrow Video, are supported too.

IMS Supplementary Service Option MX847570A-081/MX847570B-081

This option adds functions for simulating VoLTE/Video caller ID, call transfer and call hold. Various CSCF and XCAP service settings as well as supplementary service functions can be set.

Caller ID Display ON/OFF Function

After a call from the test UE, the caller ID (telephone number) display/block function can be checked at the Virtual UA status display field.

Forwarding Function

At calling from the test UE to the Virtual UA, the call can be forwarded unconditionally to the specified destination. Further, using XCAP Service designates setting of forwarding conditions and the destination.

Vir

Call Hold

MD8475B

Call Hold/Resume Function

Both test UE and Virtual UA hold operations can be verified. In addition, the call can be resumed by pressing the Resume button.

VoLTE Conference Test

The 3GPP TS 24.605 defined VoLTE Conference Call functions can be tested.

	3GPP TS 24.605
4.5.2.1.1	User joining a conference
4.5.2.1.2	User inviting another user to a conference
4.5.2.1.3	User leaving a conference
4.5.2.1.4	User creating a conference
4.5.2.1.5	Subscription for the conference event package
4.5.2.2.1	Conference focus
4.5.2.2.2	Conference notification service
4.5.2.7	Actions at the destination UE
4.6.1	Communication HOLD (HOLD)
4.6.3	Terminating Identification Restriction (TIR)
4.6.5	Originating Identification Restriction (OIR)

RCS Basic Option MX847570A-083/MX847570B-083

Rich Communication Suite (RCS) is the next evolutionary step in deploying existing simple voice and messaging (SMS, MMS) services on various networks and UEs with "rich" communications. Installing this software supports RCS defined tests of Instant Messaging (IM), Address Book, and Contents sharing.

GBA Authentication Option MX847570A-084/MX847570B-084

The software option references the 3GPP GBA Authentication algorithm to simulate the authentication procedure required when connecting to the Internet via networks other than Home Networks.

IMS Early Media Option MX847570A-085/MX847570B-085

The software option simulates the IMS Early Media sequence. It supports MRFC, MRFP, etc., nodes and can authenticate service functions such as customized ringtones from the network side.

NRBT: Function for recovering RBT (ring back tone) from network rather than from UE

The recovery status (recovery possible/not possible/recovering/ stopped) for each session is displayed on the Information screen.

Alert-Info: Provides substitute ring back tone using Alert-Info, one of the Early Media switching function

RTP Frame Control Option MX847570A-086/MX847570B-086

This software controls the media data (RTP packets) during VoLTE communications. In addition to the MUTE condition and Fixed pattern, the data itself can be delayed; it can be used to configure the static stage required at audio evaluation and battery consumption measurement.

IMS Script Basic Option MX847570A-060/MX847570B-060 XCAP Script Option MX847570A-061/MX847570B-061

The software option can be used to edit and create SIP messages/ XCAP messages using a ladder sequence to simulate the CSCF server/XCAP server behavior. Not only can configure a test environment from the service designing specification stage, but also user-specific tests, such as quasi-normal and abnormal conditions, can also be tested to easily support every test requirement.

Property Field:

Network parameters such as IP address are set here.

Scripting Field:

Sequence messages between the UE and CSCF are edited and executed here.

Script Message

IMS Log Import Option MX847570B-062

This software option enables importing Wireshark logs, and create IMS script automatically. This Script is editable using Add-in Sever window. This option help flexible evaluation of IMS.

*1: This option is unnecessary when a separate network-side UE is prepared. *2: The user must create the test message script

New Services

New network services are being deployed at an increasing rate, requiring more-and-more tests for UEs supporting such new services. The MD8475A/MD8475B makes it easy to support new mobile test environments.

WLAN Offload Tests

Offloading data traffic to WLAN networks is being deployed as a technology for preventing traffic congestion on mobile networks. The MD8475A/MD8475B supports a WLAN data offload test environment.

WLAN Offload Basic Option MX847570A-070/MX847570B-070

The software option provides functions for forwarding packets between the UE and networks with both Trusted non-3GPP Access and Untrusted non-3GPP Access authentication functions, as well as for monitoring packets graphically.

ePDG Option MX847570A-071/MX847570B-071

The software option supports the IKEv2 key exchange procedure and IPsec communications functions for Untrusted non-3GPP Access network authentication.

ANDSF Option MX847570A-072/MX847570B-072

The software option supports the function for setting and distributing the system selection policy between 3GPP and WLAN (distributes Policy and Discovery Information according to request from UE, and receives Location and Profile reports from UE).

Extended ePDG Option MX847570A-073/MX847570B-073

The software option supports configuration of an ePDG status fault test environment for inserting errors into the ePDG sequence, setting timeouts, etc. Additionally, this option can be used to support Fast Re-Authentication (EAP-SIM/EAP-AKA) tests without the need to generate UE-side authentication keys.

Wi-Fi Calling Evaluation Environment

Wi-Fi Calling is a function for making voice calls and sending/ receiving SMS over WLAN. Using this function, voice calls can be made using the telephone number registered inside the SIM card. Combining the MD8475A/MD8475B with the WLAN option supports verification of Wi-Fi Calling voice calls as well as handover tests from VoLTE to Wi-Fi Calling and vice versa.

Signalling Tester MD8475A/MD8475B Applications

Power Consumption Test

SmartStudio supports detailed settings such as changes to the UE RF output and stopping packet communications.

Base Station Settings

Any messages, such as Paging Cycle, UL TPC, etc., can be sent to the UE*.

Support W-CDMA CPC, Ec/lor, etc.

Packets Communication State (RRC State Change) Settings

When packets stop passing over the network during data packet communications, the Cell Status can be transitioned at a specific timing to switch the UE to any RRC State. This is useful for configuring a test environment simulating a real network when testing battery life.

*: The settable items differ by the systems.

Check UE Tx RF Power

RF Measurement MX847506A Quick TRX Diagnosis MX847506B

Adding RF Measurement supports verification of UE Tx RF power. A UE power consumption test environment can be configured easily by combined use with SmartStudio base station settings from the UE. Further, BLER can be verified using graphical or tabulated data.

Power Consumption Test using SmartStudio Manager

The MX847503A SmartStudio Manager software is bundled with test cases for measuring the UE power consumption. In addition, the MX847503A can also control peripheral devices simultaneously, shortening the time required for configuring UE test environments.

Flexible Base Station Settings

Base station settings are essential for testing UE connections. Not only does SmartStudio support frequency band and Tx and Rx power settings, it can also be set to behave as a real base station.

Setting Base Station Parameters

Cell Parameter Settings

Up to 32 base station parameters can be saved in one file to prevent setting errors and assure fast, smooth testing when making slight changes to frequency and bandwidth before retesting.

32 cells per system (Total 160 cells)

At-a-Glance Confirmation of UE Performance

Moving the mouse cursor over the SmartStudio UE icon displays a summary of the UE capability information for easy confirmation of the categories, bands, etc., supported by the UE under test.

System	Information Element	Example
	Access Stratum Release	Rel.12
	UE Category	4, 6, 9
LTE	Supported Band	1, 2, 3, 4
	Band Combination	1A-2A, 3C
	Band Combination (Rel.11)	1A-2A, 3C
	Access Stratum Release	Rel.10
W-CDMA	HSDPA Category (Rel.7/Rel.8)	10 (14/24)
W-CDIVIA	HSUPA Category	6
	Supported Band	I, II
	Access Stratum Release	Rel.9
TD-SCDMA	HSDPA Category	15
TD-SCDIVIA	HSUPA Category	6
	Supported Band	a, f
	GPRS Multislot Class	12
GSM/GPRS	EGPRS Multislot Class	12
	Supported Band	GSM E

Base Station Power Settings

The Tx/Rx power of the base station can be changed during testing to simulate Out-of-Service tests by stopping RF on Smartstudio.

Setting Neighbor Cells

Neighbor cells can be set to display the mix of multiple cells for a UE graphically.

Creating Environment for Difficult Tests on Live Network

Some UE tests cannot be run on a commercial live network and are difficult on a test network. SmartStudio makes it easy to support these tests.

Reject Tests

Attach Reject/Ignore

By setting specific messages, UE connection request can be rejected when the UE tries to connect the base station. In addition, the base station ignores messages from the UE by setting 'Ignore', enabling confirmation of the UE behavior when messages are ignored.

Barred Call and Emergency Call Tests

Access Class Control

Sometimes, carriers limit access at events where there are too many people trying to call at once or during abnormally busy times like New Year. SmartStudio can configure an access control test environment, which is difficult to do on a live network.

Emergency Call Test

Obviously, emergency calls cannot be tested on a live network but this is an essential test that must be performed. SmartStudio offers emergency call test settings and execution.

System	Control Method	Operation
	Not Barred	No Access Control
W-CDMA/	Barred	Call barring for all communications
GSM	Emergency	Call barring for communications except emergency call

APN Reject

By setting specific messages, UE connection request can be rejected when the UE connects to the network.

Emergency Alerts Tests

Using the built-in SmartStudio PWS center function supports sending of emergency alerts like earthquake and tsunami warnings to the UE*.

ETWS/CMAS messages can be sent at any timing simply by selecting created/edited messages.

- ETWS (Earthquake and Tsunami Warning System used in Japan)
- CMAS (Commercial Mobile Alert System) North American Federal and state government system for sending standard-format text and audio messages to TV broadcast stations
- *****: Supports LTE/W-CDMA/GSM.

Signalling Tester MD8475A/MD8475B Applications

Configuring eCall Compliance to Application Test Environments

This solution makes it easy to configure an environment for emulating the eCall emergency rescue information system for automatically transmitting traffic accident information, including accident location, as well as for making voice calls to an emergency assistance Public Safety Answering Point (PSAP). Since emergency calls cannot be tested on live communications networks, combining the Signalling Tester MD8475A/B and eCall Tester MX703330E software is the perfect answer to testing IVS (In Vehicle System) communications functions.

eCall Tester MX703330E

The MX703330E emulates the eCall system IVS and PSAP communications sequence. It supports quasi-normal test of MSD timeout that are hard to simulate on a live network, as well as comparison of reference MSD (expected) and received data.

Features

- EN16454-compliant
- Implements communications sequence tests between IVS and PSAP
- Trace-displays status of eCall communications (MSD-Voice) and MSD communications (in-band modem)
- Displays in-band modem sequence and MSD decode data (conversion to meaningful data) execution results and outputs as data file
- Sets reference MSD (expected values) and displays results of comparison with received MSD
- Simulates base station operation in eCall Tester background, making specialist mobile protocol knowledge unnecessary for eCall evaluation
- Performs external control of eCall tester using SmartStudio Manager automation tool to perform PSAP operations

EU eCall Compliance Test

European Commission regulation (EU) 2017/79 approved sale of new M1 and N1 category in-vehicle eCall equipment from 31 March 2018. eCall is an emergency rescue information system for automatically transmitting traffic accident information, including accident location, as well as for making voice calls to an emergency assistance centre, or Public Safety Answering Point (PSAP). The eCall Tester with EN 16454 PSAP server function supports configuration of the type-certification test environment. Additionally, the interactive GUI simplifies parameter changes, while display of real-time MSD analysis data improves the efficiency of pre-compliance testing, including debugging.

eCall Application Testing

Some IVS have requirements for both calling and Telematics functions while driving. Figure shows the handover between base stations during driving.

Figure shows the situation when the IVS switches from a 4G network connection used by Telematics services during driving to a 2G/3G network connection for eCall functions when an accident occurs. To emulate this type of test environment, the MD8475A and eCall Tester software perform the handover and CS Fallback switching tests in combination with the eCall function test. Requires Multi-Cell Option MX703330E-061.

One-touch handover test settings save time and eliminate user worries. The following cells are supported.

	LTE	W-CDMA	GSM
LTE*	—	✓	√
W-CDMA	\checkmark	✓	\checkmark
GSM	√	✓	√

*: VoLTE not supported

These tests help to greatly improve IVS quality and reliability.

eSIM OTA Verification Solution eUICC Profile Manager Z2002A

MD8475A with COMPRION's software eUICC Profile Manager can performing eSIM (Embedded SIM) test.

eSIM allows the communication protocol information on a SIM to be changed via an OTA (Over the Air) environment.

Signalling Tester MD8475A/MD8475B Automation Functions

Regression Tests Necessity

Verification of existing functions and regression testing are key elements of software update testing during UE development. Automated and repeated testing of known items to confirm the absence of new software bugs plays a major role in improving development efficiency and cutting costs.

Automated Testing with SmartStudio: SmartStudio Manager MX847503A

The SmartStudio Manager MX847503A software is for editing test sequences and running created test sequences automatically and continuously. This software automates manual testing using the SmartStudio MX847570A software. Automated, unmanned operation test improves efficiency. Additionally, Pass/Fail results can be reported along with the continuous test.

Regression Tests Necessity

UE Operation Auto-Recording/Auto-Executing: Smartphone Control Platform MX847504A

The MX847504A software option can records Android OS smartphone operations and offers an environment for creating, editing and running UE automated control scripts. Regression and stable operation confirmation testing of UE are easy using the intuitive editing environment with pre-installed scripts and GUI.

Android[™] is a trademark of Google Inc.

Regression Tests and Test Sequences

SmartStudio Manager has various test sequences over 180. These test sequences can be used to confirm basic UE operations, such as making and answering voice calls and SMS messages, as well as measuring throughput. Users can use the AT command interface and Smartphone Control Platform MX847504A to control the UE remotely and perform continuous testing without hands-on UE operation.

Signalling Tester MD8475A System Configurations/Option/Software

Main Frame Options

2nd RF MD8475A-001

This option is required for tests using two RF signals, such as 2-cell and MIMO tests.

Multi-cell Software MX847502A

This option is required when simultaneously activating two cells such as at handover tests within the same system, Inter-RAT tests between different systems, LTE Carrier Aggregation tests, etc.

RF Measurement MX847506A

Installing combinations of the MX847510A, MX847520A, and MX847550A software options supports extended RF Tx power accuracy, RF Rx power, and BLER measurements for each system.

Multimedia Interface Software MX847508A

This software is required for end-to-end voice tests between microphones and speakers (headsets) connected to the MD8475A and the mobile equipment. The W-CDMA and GSM AMR-NB (AMR Narrowband), GSM EFR (Enhanced Full Rate Speech), FR (Full Rate Speech), and HR (Half Rate Speech) codec can be used.

AMR-WB MX847508A-001

This option supports the W-CDMA AMR-WB (AMR Wideband) codecs. The MX847508A is required.

Supported voice codec list

Supported Codecs	Multimedia Interface Software MX847508A	AMR-WB MX847508A-001
AMR-NB (W-CDMA/GSM)	✓	—
GSM-EFR (GSM)	√	—
GSM-FR (GSM)	√	—
GSM-HR (GSM)	✓	—
AMR-WB (W-CDMA)	—	\checkmark

SmartStudio MX847570A

This software supports the user interface for scenario-less testing In addition to offering functions such as sending and receiving SMS messages, sending and receiving ETWS/CMAS messages, making and receiving voice calls, and sending and receiving data packets, it also supports CSCF server functions required for IMS service tests.

Automation Tool

SmartStudio Manager MX847503A

This option increases the efficiency of evaluations by automating manual tests performed by the MX847570A SmartStudio software. In addition, the package includes test sequences required for evaluating basic functions.

eCall Tester Control Library MX847503A-923

This library option is for remote control of tests using the MX703330E eCall tester. Test automation without manual operation increases test efficiency.

Smartphone Control Platform MX847504A

Recorded via ADB and UE automated control scripts can be created, edited and run. As well as supporting automated control from the MX847503A, two-way automatic control of the measuring instrument and UE supports an operator-free test environment for higher test efficiency.

W-CDMA

• Basic Configuration (Voice/Video/Packet)

Multi-signalling Unit MD8475A-070

W-CDMA Simulation Software MX847510A

W-CDMA Option MX847570A-010

These are for basic W-CDMA configuration. These tests support voice, videophone, packet, and SMS tests.

Options

HSPA Option MX847510A-001

This option supports HSPA UE categories defined by the 3GPP Release 5/Release 6 standards.

HSPA Evolution/DC-HSDPA Option MX847510A-011 HSPA Evolution/DC-HSDPA Option MX847570A-011

These options support HSPA Evolution and DC-HSPA packet communications tests for high-speed packet services used by W-CDMA systems.

3GPP TS 25.306 Category List for MX847570A

HSDPA

HS-DSCH Category	HS-DSCH Codes	Minimum Inter-TTI	TB-Sizes	Total Number of Soft Channel Bits	Modulation	Maximum Throughput [bps]

24	15	1	42192	518400	64QAM	42192000

HSUPA

E-DCH Category	E-DCH Codes	Minimum Spreading Factor	Support for TTI EDCH	TB-Sizes E-DCH TTI	Maximum Throughput [bps]
3	2	SF4	10 ms TTI	14484	1459500
5	2	SF2	10 ms TTI	20000	2918500
6	4	SF2	10 ms TTI	14484	5760000

*: Not supported when UE specifies a category.

Support Service

MX847510A 1Year Support Service MX847510A-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

Signalling Tester MD8475A System Configurations/Option/Software

LTE

Basic Configuration

Multi-signalling Unit MD8475A-070 LTE Simulation Software MX847550A LTE FDD Option MX847550A-010 LTE TDD Option MX847550A-015 LTE FDD Option MX847570A-050 LTE TDD Option MX847570A-055

These are for basic LTE FDD/TDD configuration. It supports both FDD and TDD technologies. These tests support confirmation of connections with LTE UEs during SISO, packet communications, and SMS sending/receiving. In addition, 2-cell tests are supported by installing the 2-cell Software MX847502A.

LTE 2×2 MIMO Option MX847550A-020

This option adds 2×2 MIMO to the MX847550A. Supported LTE 2×2 MIMO Functions.*

LTE Carrier Aggregation Option MX847550A-040

This software options supports LTE 2CC Carrier Aggregation. It supports the 2CC SISO test environment. Additionally, installing the MX847550A-020 software supports the 2CC MIMO test environment.

Fading IO Option MD8475A-003

This hardware option is required for connecting two MD8475A sets or the combination of one MD8475A and one MD8430A. In addition, combining one MD8475A and one MF6900A Fading Simulator supports configuration of LTE FDD Fading test environment.

LTE RoHC Option MX847550A-060

This option adds better compression algorithms to improve LTE IP packet transfer efficiency.

Supported Profiles

IP	Profile
0x0000	No compression (LTE)/Uncompressed (UMTS)
0x0001	RTP/UDP/IP
0x0002	UDP/IP

Support Service

MX847550A 1Year Support Service MX847550A-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

*****: Handover tests not supported when testing 2×2 MIMO.

Signalling Tester MD8475A System Configurations/Option/Software

GSM

Basic Configuration

GSM Signalling Unit MD8475A-020 GSM/GPRS Simulation Software MX847520A GSM Option MX847570A-020

This is the basic configuration for performing GSM/GPRS tests. It supports voice and packet communications tests, SMS sending and receiving, etc.

Options

EGPRS Option MX847520A-001

This option supports EGPRS evaluation — a GPRS high-speed, data communication method. Application tests using EGPRS communications are supported.

Supported EGPRS Specifications

Layer 1	Frequency Bandwidth	850, 900, 1800, 1900 MHz		
	Modulation &	MCS 1, 2, 3, 4 (GMSK)		
	Coding Scheme	MCS 5, 6, 7, 8, 9 (8PSK)		
	Number of Slots	Up to Multi Slot Class 12		
	Number of Sides	(DL: 4/UL: 4/SUM: 5)		
	Channel Combination	Combination 11 & 13		
Layer 2, 3	Broadcasting	BCCH/CCCH, PBCCH/PCCH		
	Control Channel	Been/eeen, FBeen/Feen		
	ARQ Type	Туре 1		
	Window Size	64 to 192		
Standard		3GPP Release 99		

Support Service

MX847520A 1Year Support Service MX847520A-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

TD-SCDMA

Basic Configuration

TD-SCDMA Signalling Unit MD8475A-040

TD-SCDMA Simulation Software MX847540A TD-SCDMA Option MX847570A-040

D-SCDWA Option WA847570A-040

These are for basic TD-SCDMA configuration which support voice, videophone, packet, and SMS tests.

Options

TD-HSPA Option MX847540A-001

This is for evaluating all 3GPP TS 25.306 HSPA UE categories*1.

3GPP TS 25.306

TD-HSDPA

HS-DSCH category	Maximum number of HSDSCH codes per timeslot	Maximum number of HSDSCH timeslots per TTI	Maximum number of HSDSCH transport channel bits can be received within an HSDSCH TTI	Total number of soft channel bits	Maximum Throughput [bps]
Category 1 to 3	16	2	2788	11264	557600
Category 4 to 6	16	2	5600	22528	1120000
Category 7 to 9	16	3	8416	33792	1688200
Category 10 to 12	16	4	11226	45056	2245200
Category 13 to 15	16	5	14043	56320	2808600

TD-HSUPA

E-DCH category	Maximum number of E-DCH timeslots per TTI	Maximum number of E-DCH transport channel bits that can be received within an E-DCH TTI	Maximum Throughput [bps]
Category 1	2*2	2754	550800
Category 2	3*2	4162	832400
Category 3	2*2	5532	1106400
Category 4	3*2	8348	1669600
Category 5	4*2	11160	2232000
Category 6	5* ²	11160	2232000

*****1: MX847570A supports Category 6 only.

+2: One timeslot supports two physical channels when 16QAM not used.

Support Service

MX847540A 1Year Support Service MX847540A-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

IMS Options

IMS Script Basic Option MX847570A-060

This software supports scripting of the communication procedure between the test UE and CSCF server using a ladder sequence to provide a very flexible and expandable test environment.

XCAP Script Option MX847570A-061

This option provides a test environment with high flexibility and expandability for creating scripts using a ladder sequence to edit XCAP messages between the UE and server without the need to prepare an actual server.

Extended CSCF Option MX847570A-080

This software option adds functions for calling from the network to the UE as well as extended functions for CSCF-server-side network congestion and no response status.

IMS Supplementary Service Option MX847570A-081

This software option adds other service tests, including VoLTE caller ID display, call forwarding, call holding, etc.

RCS Basic Option MX847570A-083

This software option simulates RCS services. It is used to perform tests including RCS Configuration, Registration, Instant Messaging, etc.

GBA Authentication Option MX847570A-084

This option has the 3GPP GBA Authentication algorithm, authentication procedure and parameter settings for simulating GBA operations.

IMS Early Media Option MX847570A-085

This software supports IMS Early Media sequence tests. It can be used to confirm customized call tone services at the network side, such as NRBT (Network Ring Back Tone) and CAT (Customized Alerting Tone).

RTP Frame Control Option MX847570A-086

This option is for controlling media data (RTP packets) during VoLTE communications. It can be used to configure a voice environment in the MUTE status and with fixed data; a measurement environment can be configured for abnormal audio quality verification and battery power consumption tests in a fixed state.

Support Service

MX847570A-060 1-Year Technical Support Service MX847570A-TS160

This contract offers customers support for technical enquiries for 1 year.

MX847570A-061 1-Year Technical Support Service MX847570A-TS161

This contract offers customers support for technical enquiries for 1 year.

WLAN Offload Options

WLAN Offload Basic Option MX847570A-070

This software option provides an EAP authentication server for performing EAP over RADIUS communications (EAP-SIM/EAP-AKA) between a WLAN access point and the EAP authentication server. Additionally, data access by the physical bearers is displayed to verify the 3GPP/WLAN switchover.

ePDG Option MX847570A-071

This software option provides an ePDG server for testing the UE functions at Untrusted non-3GPP Access by running IKEv2 key exchanges and IPsec communications between the UE and ePDG. It requires the MX847570A-070 option as well.

ANDSF Option MX847570A-072

This software option provides the ANDSF function for testing the UE functions after ANDSF policy distribution to the UE. It requires the MX847570A-070 options as well.

Extended ePDG Option MX847570A-073

This software option supports configuration of an ePDG status fault test environment for inserting errors into the ePDG sequence, setting timeouts, etc. Additionally, this option can be used to support Fast Re-Authentication (EAP-SIM/EAP-AKA) tests without the need to generate UE-side authentication keys. It requires the MX847570A-070/MX847570A-071.

eCall Options

eCall Tester (Perpetual License) MX703330E-PL010

This option simulates the PSAP used by eCall services to support the eCall sequence (MSD call \rightarrow Voice call) between the IVS and PSAP at a road accident.

The following test standards are supported:

- TS 26 .267 V8.6.0 (2011-03)
- TS 26 .268 V8.6.0 (2011-03)
- EN15722: 2015
- EN16062: 2015
- EN16454: 2015
- ISO3779: 2009

This option can be used as a test environment for model authentication in accordance with the EN16454 recommendations. This option provides audio replay and record functions.

MSD ERA GLONASS Option MX703330E-031

This option supports the MSD data communications function over SMS used by the ERA-GLONASS system The following test standards are supported:

- GOST R 54619-2011
- GOST R 54620-2011
- GOST R 54721-2011
- GOST R 55530-2013

EGTS Server ERA GLONASS Option MX703330E-032

This option provides a test environment to send/receive and encode/decode EGTS messages defined in the GOST R 54619/54620. MX703330E-031 is separately required.

NG112 LTE eCall Option MX703330E-041

This option provides functional tests for MSD data communication and voice call over IMS defined in the RFC8147 standard.

Multi-Cell Option MX703330E-061

This option provides the handover test environment required when setting two or more cells as well as the CS Fallback test environment at the eCall environment. Practical eCall module tests are supported using this option.

The cell combinations are as follows:

	LTE	W-CDMA	GSM
LTE*	—	✓	~
W-CDMA	√	✓	~
GSM	√	✓	√

*: VoLTE is not supported

Support Service

MX703330E 1-Year Support Service MX703330E-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

SSM Test PKG European eCall MX847503A-601

This test package provides automated test environment. Opening the test case on the SSM, it shows test procedures of test items defined in the (EC) 2017/79 and EN16454, and automatically configures the setting of MD8475A/MD8475B and eCall tester. This test package also has report functions for each standards.

SSM Test PKG GOST 33467 MX847503A-701

This test package provides automated test environment. Opening the test case on the SSM, it shows test procedures of test items defined in the GOST33457, and automatically configures the setting of MD8475A/MD8475B and eCall tester.

This test package also has report functions for each standards.

Scenario Tools

SIDE Software MX847580A SIP Option MX847580A-018

These software are for executing scenarios created using the MX843080A Scenario Integrated Development Environment in combination with the MX847510A, MX847520A, and MX847550A software.

Ciphering Option

W-CDMA Ciphering Option MX847510A-050

This option adds the W-CDMA ciphering function^{*1, *2} and supports for KASUMI (3GPP-recommended algorithm).

GSM/GPRS Ciphering Option MX847520A-050

This option adds the GSM/GPRS ciphering function*1,*2 and supports both the GSM A5/1, A5/2, and A5/3 ciphering algorithms as well as the GPRS GEA/1, GEA/2, and GEA/3 ciphering algorithms.

TD-SCDMA Ciphering Option MX847540A-050

This option adds the TD-SCDMA ciphering function *1,*2 and supports SNOW 3G (3GPP-recommended algorithm).

LTE Ciphering Option MX847550A-050

This option adds the LTE ciphering function^{*1, *2} and supports SNOW 3G (3GPP-recommended algorithm) and AES.

★1: Does not work with MX847570A.

*2: The Integrity Algorithm does not require this option.

Signalling Tester MD8475A Specifications

	RF Input/Output connector (Main, Aux 1, Aux 2)
	Connector: N type, Impedance: 50Ω, VSWR: ≤1.5 (500 MHz to 3 GHz)
	Reference oscillator
	Frequency: 10 MHz
	Level: TTL level
RF Connector	Connector: BNC type
	Startup characteristics: ±5 × 10 ⁻⁸ (10 minutes after power-on, referenced to frequency 24 hours after power-on)
	Aging rate: 2×10^{-8} /day, $\leq 1 \times 10^{-7}$ /year (referenced to frequency 24 hours after power-on)
	Temperature characteristics: $\leq \pm 2 \times 10^{-8}$
	External reference input
	Frequency: 10 MHz, Acceptable frequency range: ± 0.5 ppm, Level: ≥ 0 dBm, Impedance: 50 Ω ,
	Connector: BNC type
	Frequency
	Frequency range: 350 MHz to 3.6 GHz
	Setting resolution: 100 kHz (Depending on MX847501A used)
	Accuracy: Based on reference oscillator accuracy
	Output level
T	Level range: –130 to –10 dBm (Main, Aux1, Aux2)
Transmission Characteristics	Resolution: 0.1 dB
	Transmission level
	$\pm 1.0 \text{ dB}$ (-120 dBm \leq Output level, 350 MHz \leq Frequency \leq 3 GHz, $\pm 20^{\circ}$ to $\pm 30^{\circ}$ C, after CAL)
	±1.2 dB (–120 dBm ≤ Output level, 3 GHz < Frequency ≤ 3.6 GHz, +20° to +30°C, after CAL)
	Signal purity
	Non-harmonic spurious: ≤–40 dBc (at ≥500 kHz frequency offset) Harmonics: ≤–25 dBc
	Frequency
	Frequency range: 350 MHz to 3.6 GHz
	Setting resolution: 100 kHz (Depending on MX847501A used) Level
	Maximum input level: +35 dBm (Average)
	Input level range: –60 to +35 dBm
	(with MD8475A-010, MD8475A-011, MD8475A-030, MD8475A-032, MD8475A-050, MD8475A-070)
	-30 to $+40$ dBm (in-burst average power) (with MD8475A-020)
	Reference level: -60 to +35 dBm
	Reception level (with MX847506A)
	MX847510A
Reception Characteristics	$\pm 1.1 \text{ dB}$ (-60 to +35 dBm, 350 MHz \leq Frequency \leq 3 GHz, +20° to +30°C, after CAL)
	±1.3 dB (-60 to +35 dBm, 3 GHz < Frequency ≤ 3.6 GHz, +20° to +30°C, after CAL)
	MX847520A
	±1.1 dB (–30 to +40 dBm, 350 MHz ≤ Frequency ≤ 3 GHz, +20° to +30°C, after CAL)
	±1.3 dB (–30 to +40 dBm, 3 GHz < Frequency ≤ 3.6 GHz, +20° to +30°C, after CAL)
	MX847550A
	±1.1 dB (–50 to +35 dBm, 350 MHz \leq Frequency \leq 3 GHz, +20° to +30°C, after CAL)
	±1.3 dB (–50 to +35 dBm, 3 GHz < Frequency ≤ 3.6 GHz, +20° to +30°C, after CAL)
	± 2.0 dB (–60 to +35 dBm, 350 MHz \leq Frequency \leq 3.6 GHz, after CAL)
	Variable range
	Rx level setting resolution: 1 dB
	Display: Color TFT LCD screen, 12.1 inches (wide type), 1280 × 800 dots
	External interface
	Trigger I/O: BNC
	Call Proc Timing I/O: 15-pin mini D-Sub connector
	Call Proc Serial I/O: D-sub connector, RS-232C level
	Call Proc Ethernet A/B: RJ-45 connector, 10Base-T/100Base-TX/1000Base-T
General	Handset: RJ-11 connector
General	Headphone: 3.5-mm dia. headphone jack
	Microphone: 3.5-mm dia. microphone jack
	USB: Type A, 4 ports
	RS-232C: D-sub connector, conforms to RS-232C
	GPIB: IEEE488 connector
	VGA: Mini D-Sub connector
	Ethernet 0/1: RJ-45 connector 10Base-T/100Base-TX/1000Base-T
Power Supply	100 Vac to 120 Vac (±10%)/200 Vac to 240 Vac (−15%/+10%, Max.: 250 Vac), 50 Hz to 60 Hz (Rating), ≤600 VA (Max.)
Dimensions and Mass	426 (W) × 221.5 (H) × 398 (D) mm (excl. protrusions), <25 kg (with all options)
Temperature Range & Humidity	Operation: +5° to +40°C, Storage: −20° to +60°C, ≤90% (no condensation)
EMC	2014/30/EU, EN61326-1, EN61000-3-2
CE LVD	2014/35/EU, EN61010-1

*1: Ciphering function not supported *2: Support for installing the Enhanced Multi-signalling Unit (MD8475B-071) is expected

*5: Limited to 50 Mbps throughput when MD8475B-070 installed *6: Requires MD8475B-071 *7: DCH Measurement Occasion/Idle Interval Measurement function not supported *8: Requires separate MMS server

in future.
*3: Only dual system configuration supported
*4: Two-way tests using two UEs not supported

Signalling Tester MD8475B Panel Layout

- Remote lamp

- **③** Safety label

Main Frame Options

Extended RF MD8475B-002

This option is required to simulate the operation of three or more base-station cells. It supports 8Tx/4RX using the MD8475B.

Fading IO Option MD8475B-004

Combining the Signalling Tester MD8430A with the fading option and the MD8475B supports configuration of a fading test environment.

IP Extension Option MD8475B-005

This option enables FTP throughput testing with multiple external servers.

Multi-cell Software MX847502B

This option is required when simultaneously activating two or more cells such as at handover tests within the same system, Inter-RAT tests between different systems, LTE Carrier Aggregation tests, etc.

Multimedia Interface Software MX847508B

This option is required when performing end-to-end voice tests with microphones and speakers (headset) connected to the MD8475B. It can be used for W-CDMA and GSM AMR-NB (AMR Narrowband), GSM EFR (Enhanced Full Rate Speech), FR (Full Rate Speech), and HR (Half Rate Speech) codecs.

AMR-WB MX847508B-001

This option supports the W-CDMA AMR-WB (AMR Wideband) codec. It requires the MX847508B.

Supported voice codec list

Supported Codecs	Multimedia Interface Software MX847508B	AMR-WB MX847508B-001
AMR-NB (W-CDMA/GSM)	~	—
GSM-EFR (GSM)	~	—
GSM-FR (GSM)	~	—
GSM-HR (GSM)	~	—
AMR-WB (W-CDMA)	—	✓

SmartStudio MX847570B

This software supports the user interface for scenario-less testing. In addition to offering functions such as sending and receiving SMS messages, sending and receiving ETWS/CMAS messages, making and receiving voice calls, and sending and receiving data packets, it also supports CSCF server functions required for IMS service tests.

Support Service

MX847570B 1Year Support Service MX847570B-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

W-CDMA

• Basic Configuration (Voice/Video/Packet)

Multi-signalling Unit MD8475B-070 W-CDMA Simulation Software MX847510B W-CDMA Option MX847570B-010

These are for basic W-CDMA configuration. These tests support voice, videophone, packet, and SMS tests.

Options

HSPA Evolution/DC-HSDPA Option MX847510B-011 HSPA Evolution/DC-HSDPA Option MX847570B-011

These options support HSPA Evolution and DC-HSPA packet communications tests for high-speed packet services used by W-CDMA systems.

LTE

Basic Configuration

Multi-signalling Unit MD8475B-070 Enhanced Multi-signalling Unit MD8475B-071 LTE Simulation Software MX847550B LTE Option MX847570B-050

These are for basic LTE FDD/TDD configuration. It supports both FDD and TDD technologies. These tests support confirmation of connections with LTE UEs during SISO, packet communications, and SMS sending/receiving. In addition, multi-cell tests are supported by installing the Multi-cell Software MX847502B.

★ These UE Category tables show the case when MD8475B-071 is installed.

Options

LTE 2×2 MIMO Option MX847550B-020

This option adds 2×2 MIMO to the MX847550B.

LTE 4×4 MIMO Option MX847550B-021

This option adds 4×4 MIMO to the MX847550B.

LTE Licensed Assisted Access (LAA) Option MX847550B-030

This software option provides LTE Licensed Assisted Access (LAA) capability that can be used with the MIMO options and the Carrier Aggregation Options.

LTE Carrier Aggregation Option MX847550B-040

This software option supports LTE 2CC Carrier Aggregation. It supports the 2CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 2CC MIMO test environment.

LTE Carrier Aggregation DL3CCs Option MX847550B-041

This software option supports LTE 3CC Carrier Aggregation. It supports the 3CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 3CC MIMO test environment.

LTE Carrier Aggregation DL4CCs Option MX847550B-042

This software option supports LTE 4CC Carrier Aggregation. It supports the 4CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 4CC MIMO test environment.

LTE Carrier Aggregation DL5CCs Option MX847550B-043

This software option supports LTE 5CC Carrier Aggregation. It supports the 5CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 5CC MIMO test environment.

LTE RoHC Option MX847550B-060

This option adds better compression algorithms to improve LTE IP packet transfer efficiency.

Supported Profiles

IP	Profile		
0x0000	No compression (LTE)/Uncompressed (UMTS)		
0x0001	RTP/UDP/IP		
0x0002	UDP/IP		

LTE 20 Layers Extension Option MX847550B-070

This option enables LTE 20 Layers (LTE 5CC, 4×4 MIMO) testing. If this option is not installed, LTE 16 Layers (4×4 MIMO for 3CCs and 2×2 MIMO for 2CCs out of LTE 5CCs) is maximum.

GSM

Basic Configuration

GSM Signalling Unit MD8475B-020 GSM/GPRS Simulation Software MX847520B GSM Option MX847570B-020

This is the basic configuration for performing GSM/GPRS tests. It supports voice and packet communications tests, SMS sending and receiving, etc. Additionally, it can be used for evaluating application functions using EGPRS communications for EGPRS highspeed data communications.

Supported EGPRS Specifications

	Frequency Bandwidth	850, 900, 1800, 1900 MHz	
	<u> </u>		
	Modulation & Coding	MCS 1, 2, 3, 4 (GMSK)	
Lavor 1	Scheme	MCS 5, 6, 7, 8, 9 (8PSK)	
Layer 1	Number of Slots	Up to Multi Slot Class 12	
	Number of Slots	(DL: 4/UL: 4/SUM: 5)	
	Channel Combination	Combination 11 & 13	
	Broadcasting Control		
	Channel	BCCH/CCCH, PBCCH/PCCH	
Layer 2, 3	ARQ Type	Type 1	
	Window Size	64 to 192	
Standard		3GPP Release 99	

TD-SCDMA

Basic Configuration

TD-SCDMA Signalling Unit MD8475B-040 TD-SCDMA Simulation Software MX847540B TD-SCDMA Option MX847570B-040

These are for basic TD-SCDMA/TD-HSUPA*¹ configuration which support voice, videophone, packet, and SMS tests.

3GPP TS 25.306

TD-HSDPA

HS-DSCH category	Maximum number of HSDSCH codes per timeslot	Maximum number of HSDSCH timeslots per TTI	Maximum number of HSDSCH transport channel bits can be received within an HSDSCH TTI	Total number of soft channel bits	Maximum Throughput [bps]
Category 1 to 3	16	2	2788	11264	557600
Category 4 to 6	16	2	5600	22528	1120000
Category 7 to 9	16	3	8416	33792	1688200
Category 10 to 12	16	4	11226	45056	2245200
Category 13 to 15	16	5	14043	56320	2808600

TD-HSUPA

E-DCH category	Maximum number of E-DCH timeslots per TTI	Maximum number of E-DCH transport channel bits that can be received within an E-DCH TTI	Maximum Throughput [bps]
Category 1	2*2	2754	550800
Category 2	3*2	4162	832400
Category 3	2*2	5532	1106400
Category 4	3*2	8348	1669600
Category 5	4*2	11160	2232000
Category 6	5* ²	11160	2232000

*****1: MX847570B supports Category 6 only.

+2: One timeslot supports two physical channels when 16QAM not used.

IMS Options

IMS Script Basic Option MX847570B-060

This software supports scripting of the communication procedure between the test UE and CSCF server using a ladder sequence to provide a very flexible and expandable test environment.

XCAP Script Option MX847570B-061

This option provides a test environment with high flexibility and expandability for creating scripts using a ladder sequence to edit XCAP messages between the UE and server without the need to prepare an actual server.

IMS Log Import Option MX847570B-062

This software option enables importing Wireshark logs, and create IMS script automatically. This Script is editable using Add-in Sever window. This option help flexible evaluation of IMS.

Extended CSCF Option MX847570B-080

This software option adds functions for calling from the network to UE as well as extended functions for CSCF-server-side network congestion and no response status.

IMS Supplementary Service Option MX847570B-081

This software option adds other service tests, including VoLTE caller ID display, call forwarding, call holding, etc.

RCS Basic Option MX847570B-083

This software option simulates RCS services. It is used to perform tests including RCS Configuration, Registration, Instant Messaging, etc.

GBA Authentication Option MX847570B-084

This option has the 3GPP GBA Authentication algorithm, authentication procedure and parameter settings for simulating GBA operations.

IMS Early Media Option MX847570B-085

This software supports IMS Early Media sequence tests. It can be used to confirm customized call tone services at the network side, such as NRBT (Network Ring Back Tone) and CAT (Customized Alerting Tone).

RTP Frame Control Option MX847570B-086

This option is for controlling media data (RTP packets) during VoLTE communications. It can be used to configure a voice environment in the MUTE status and with fixed data; a measurement environment can be configured for abnormal audio quality verification and battery power consumption tests in a fixed state.

• Support Service (IMS options)

MX847570B-060 1-Year Technical Support Service MX847570B-TS160

This contract offers customers support for technical enquiries for 1 year.

MX847570B-061 1 Year Technical Support Service MX847570B-TS161

This contract offers customers support for technical enquiries for 1 year.

WLAN Offload Options

WLAN Offload Basic Option MX847570B-070

This software option provides an EAP authentication server for performing EAP over RADIUS communications (EAP-SIM/EAP- AKA) between a WLAN access point and the EAP authentication server. Additionally, data access by the physical bearers is displayed to verify the 3GPP/WLAN switchover.

ePDG Option MX847570B-071

This software option provides an ePDG server for testing the UE functions at Untrusted non-3GPP Access by running IKEv2 key exchanges and IPsec communications between the UE and ePDG. It requires the MX847570B-070 option as well.

ANDSF Option MX847570B-072

This software option provides the ANDSF function for testing the UE functions after ANDSF policy distribution to the UE. It requires the MX847570B-070 options as well.

Extended ePDG Option MX847570B-073

This software option supports configuration of an ePDG status fault test environment for inserting errors into the ePDG sequence, setting timeouts, etc. Additionally, this option can be used to support Fast Re-Authentication (EAP-SIM/EAP-AKA) tests without the need to generate UE-side authentication keys. It requires the MX847570B-070/ MX847570B-071.

eCall Options

eCall Tester (Perpetual License) MX703330E-PL010

This option simulates the PSAP used by eCall services to support the eCall sequence (MSD call \rightarrow Voice call) between the IVS and PSAP at a road accident.

The following test standards are supported:

- TS 26 .267 V8.6.0 (2011-03)
- TS 26 .268 V8.6.0 (2011-03)
- EN15722: 2015
- EN16062: 2015
- EN16454: 2015
- ISO3779: 2009

This option can be used as a test environment for model authentication in accordance with the EN16454 recommendations. This option provides audio replay and record functions.

MSD ERA GLONASS Option MX703330E-031

This option supports the MSD data communications function over SMS used by the ERA-GLONASS system

- The following test standards are supported:
 - GOST R 54619-2011
 - GOST R 54620-2011
 - GOST R 54721-2011
 - GOST R 55530-2013

EGTS Server ERA GLONASS Option MX703330E-032

This option provides a test environment to send/receive and encode/decode EGTS messages defined in the GOST R 54619/54620. MX703330E-031 is separately required.

NG112 LTE eCall Option MX703330E-041

This option provides functional tests for MSD data communication and voice call over IMS defined in the RFC8147 standard.

Multi-Cell Option MX703330E-061

This option provides the handover test environment required when setting two or more cells as well as the CS Fallback test environment at the eCall environment. Practical eCall module tests are supported using this option.

The cell combinations are as follows:

	LTE	W-CDMA	GSM
LTE*	—	✓	\checkmark
W-CDMA	\checkmark	✓	✓
GSM	\checkmark	\checkmark	√

*****: VoLTE is not supported

Support Service

MX703330E 1-Year Support Service MX703330E-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

SSM Test PKG European eCall MX847503A-601

This test package provides automated test environment. Opening the test case on the SSM, it shows test procedures of test items defined in the (EC) 2017/79 and EN16454, and automatically configures the setting of MD8475A/MD8475B and eCall tester. This test package also has report functions for each standards.

SSM Test PKG GOST 33467 MX847503 A-701

This test package provides automated test environment. Opening the test case on the SSM, it shows test procedures of test items defined in the GOST33467, and automatically configures the setting of MD8475A/MD8475B and eCall tester.

This test package also has report functions for each standards.

Scenario Tools

SIDE Software MX847580B SIP Option MX847580B-018

These software are for executing scenarios created using the MX843080A Scenario Integrated Development Environment in combination with the MX847510B, MX847520B, and MX847550B software.

Ciphering Option

W-CDMA Ciphering Option MX847510B-050

This option adds the W-CDMA ciphering function^{*1, *2} and supports for KASUMI (3GPP-recommended algorithm).

GSM/GPRS Ciphering Option MX847520B-050

This option adds the GSM/GPRS ciphering function*1.*2 and supports both the GSM A5/1, A5/2, and A5/3 ciphering algorithms as well as the GPRS GEA/1, GEA/2, and GEA/3 ciphering algorithms.

TD-SCDMA Ciphering Option MX847540B-050

This option adds the TD-SCDMA ciphering function*^{1, *2} and supports SNOW 3G (3GPP-recommended algorithm).

LTE Ciphering Option MX847550B-050

This option adds the LTE ciphering function^{*1, *2} and supports SNOW 3G (3GPP-recommended algorithm) and AES.

★1: Does not work with MX847570B.

*2: The Integrity Algorithm does not require this option.

Upgrade Kits*

MD8475A to MD8475B Upgrade MD8475B-UG101 MD8475A to MD8475B Upgrade (with Ciphering) MD8475B-UG102 MD8475A to MD8475B Upgrade (with SIDE) MD8475B-UG103 MD8475A to MD8475B Upgrade (with Ciphering/SIDE) MD8475B-UG104 MD8475A to MD8475B Upgrade MD8475B-UG201 MD8475A to MD8475B Upgrade (with Ciphering) MD8475B-UG202 MD8475A to MD8475B Upgrade (with SIDE) MD8475B-UG203 MD8475A to MD8475B Upgrade (with Ciphering/SIDE) MD8475B-UG204

These retrofit kits upgrade the MD8475A in use to the MD8475B.

MSU Upgrade MD8475B-UG170 MSU Upgrade MD8475B-UG270

When upgrading the MD8475A in use to the MD8475B specifications, if a legacy unit such as the MD8475A-010 or MD8475A-040 is installed that cannot be transferred to the MD8475B-070 Multi-signalling Unit, the legacy unit must be changed to the MD8475B-070 with these retrofit kits.

*: Upgrade kit models vary according to the configuration of the MD8475A options in use; contact our sales section for more details.

eMSU Upgrade MD8475B-UG171 eMSU Upgrade MD8475B-UG271

The MD8475A-011, MD8475A-050 and MD8475A-070 can be changed to the MD8475B-071 when upgrading the MD8475A to the MD8475B.

eMSU Upgrade MD8475B-UG179 eMSU Upgrade MD8475B-UG279

The MD8475B-070 can be changed to the MD8475B-071.

Automation Tool

SmartStudio Manager MX847503A

This option increases the efficiency of evaluations by automating manual tests performed by the MX847570B SmartStudio software. In addition, the package includes test sequences required for evaluating basic functions.

Smartphone Control Platform MX847504A

Using this option, Android OS smartphone operations can be recorded via ADB and UE automated control scripts can be created, edited and run. As well as supporting automated control from the MX847503A, two-way automatic control of the measuring instrument and UE supports an operator-free test environment for higher test efficiency.

Signalling Tester MD8475B Specifications

		RF Input/Output connector (Main, Aux 1, Aux 2)
		Connector: N (j) type, Impedance: 50Ω
		VSWR (Main): ≤1.9 (350 MHz to 3.8 GHz), ≤2.0 (3.8 GHz to 6.0 GHz) VSWR (Aux1, 2): ≤1.5 (350 MHz to 3.8 GHz), ≤1.6 (3.8 GHz to 6.0 GHz)
		Output connector (DL Output 1 to 8)
		Connector: SMA (j) type, Impedance: 50Ω
		VSWR: ≤1.5 (350 MHz to 3.8 GHz), ≤1.6 (3.8 GHz to 6.0 GHz)
DE Commenter		Reference oscillator
RF Connector		Frequency: 10 MHz Level: TTL level
		Connector: BNC (j) type
		Startup characteristics: ≤5 × 10 ⁻⁸ (10 minutes after power-on, referenced to frequency 24 hours after power-on)
		Aging rate: 2×10^{-8} /day, $\le 1 \times 10^{-7}$ /year (referenced to frequency 24 hours after power-on)
		Temperature characteristics: ≤5 × 10 ⁻⁸ Frequency Accuracy at Shipment: ±2.2 × 10 ⁻⁸ (At +20° to +30°C, 1 hour after power-up)
		External reference input
		Frequency: 10 MHz, Acceptable frequency range: ± 1.0 ppm, Level: ≥ 0 dBm, Impedance: 50 Ω , Connector: BNC (j) type
		Frequency
		Frequency range: 350 MHz to 6.0 GHz
		Setting resolution: 100 kHz (Depending on MX847501B used)
		Accuracy: Based on reference oscillator accuracy Output level
		Level range: (Main, Aux1, Aux2): LTE : –130 to –27 dBm (350 MHz to 3.8 GHz), –130 to –32 dBm (3.8 GHz to 6.0 GHz)
		W-CDMA : -130 to -27 dBm (350 MHz to 3.6 GHz)
		Others: –130 to –25 dBm (350 MHz to 3.6 GHz)
		Level Range (DL Output 1 to 8): LTE : –115 to –5 dBm (350 MHz to 3.8 GHz), –115 to –10 dBm (3.8 GHz to 6.0 GHz)
		W-CDMA: –115 to –5 dBm (350 MHz to 3.6 GHz) Others: –115 to –3 dBm (350 MHz to 3.6 GHz)
		Resolution: 0.1 dB
		Level Accuracy (Main): –120 dBm ≤ Output Level, after CAL, excluding other effects of internal signal generator
Transmission Cl	haracteristics	±1.7 dB (350 MHz to 3.8 GHz, +20° to +30°C)
		±2.0 dB (3.8 GHz to 6.0 GHz, +20° to +30°C) Level Accuracy (Aux 1, Aux 2): −120 dBm ≤ Output Level, after CAL, excluding other effects of internal signal generator ±1.0 dB
		$\pm 1.0 \text{ dB}$ (350 MHz to 3.8 GHz, $\pm 20^{\circ}$ to $\pm 30^{\circ}$ C)
		±1.3 dB (3.8 GHz to 6.0 GHz, +20° to +30°C)
		Level Accuracy (DL Output 1 to 8): −110 dBm ≤ Output Level, after CAL
		±1.0 dB (350 MHz to 3.8 GHz, +20° to +30°C)
		±1.3 dB (3.8 GHz to 6.0 GHz, +20° to +30°C) Signal purity
		Non-harmonic spurious: ≤–30 dBc (at ≥100 kHz frequency offset)
		Harmonics: ≤–25 dBc
		Modulation Accuracy : At +20° to +30°C
		W-CDMA: ≤3.5%rms (350 MHz to 2.7 GHz)
		GSM: ≤1.5°rms (350 MHz to 2.7 GHz) LTE: ≤3.5%rms (400 MHz to 6.0 GHz)
		Frequency
		Frequency range: 350 MHz to 6.0 GHz
Reception Chara	acteristics	Setting resolution: 100 kHz (Depending on MX847501B used)
		Level Maximum input lovel: +25 dPm (Average)
		Maximum input level: +35 dBm (Average) Display: Color TFT LCD screen, 12.1 inches (WXGA), 1280 × 800 dots
		External interface
		Trigger I/O: BNC (j)
		Call Processing Timing I/O: 15-pin mini D-Sub (f) connector
		Call Processing Ethernet A/B: RJ-45 connector, 10Base-T/100Base-TX/1000Base-T
		Measure Ethernet: RJ-45 connector, 10Base-T/100Base-TX/1000Base-T Headphone: 3.5-mm dia. headphone jack
General		Microphone: 3.5-mm dia. microphone jack
		USB (Type-A) × 2 (Back Panel)
		USB (Type-A) × 4 (Front Panel)
		GPIB: IEEE488 connector VGA: Mini D-Sub connector
		Ethernet 0/1: RJ-45 connector, 10Base-T/100Base-TX/1000Base-T
		ARB : Mini D-sub connector
		Sync Input: BNC (j) x 1, Output : BNC (j) ×2
Power Supply		100 Vac to 120 Vac (±10%)/200 Vac to 240 Vac (−10%/+10%, Max.: 250 Vac), 50 Hz to 60 Hz (Rating), ≤1350 VA (Max.)
Dimensions and Mass		426 (W) × 221.5 (H) × 578 (D) mm (excl. protrusions), <40 kg (with all options)
Temperature Ra		Operation: +5° to +40°C, Storage: −20° to +60°C, ≤90% (no condensation)
	EMC	2014/30/EU, EN61326-1, EN61000-3-2
· I		2014/35/EU, EN61010-1
CE	LVD RoHS	2011/65/EU, EN50581

Signalling Tester MD8475B

Please specify the model/order number, name and quantity when ordering. The names listed in the chart below are Order Names. The actual name of the item may differ from the Order Name.

Model/Order No.	Name		Model/Order No.	Name
	Main frame			GSM system
