Brief description

CMD 50/52 is a compact unit for testing GSM mobiles. CMD 53/55 is furthermore capable of testing GSM1800 mobile phones. The CMD65 combines the functionality of CMD55 and that of CMD60 (see page 36). CMD53/55 can optionally be extended to include the DECT standard. All models can optionally be extended to include the GSM1900 standard.

All models combine small dimensions with high measurement accuracy and speed. The testers' range of capabilities includes all signalling, generator and measurement functions required for verifying the correct operation of the DUT. Thanks to their fast go/nogo tests and accurate analysis using optional extensions, CMD52 and 55 are equally suited for use in service and production.

For use in service and maintenance, models CMD50 and CMD53, which are based on CMD52 and CMD55 but have a reduced number of facilities, are available.

Main differences of CMD52/53 to CMD52/55

- Remote control via RS-232 only (no IEC/IEEE bus)
- No multifunction connector on front panel
- Speech coder/decoder cannot be integrated
- Optional ammeter and voltmeter
- High-sensitivity 2nd RF input available as an option

Operation

Operation of the CMD is extremely user-friendly and requires no detailed GSM knowledge. The high-contrast, backlit LCD provided with softkeys on both sides allows convenient callup of test routines under menu control.

Remote control

- CMD controlled via RS-232 or IEC/IEEE-bus interface uses SCPI-compatible commands
- Designed for fast speed to yield high throughputs in production

Autotest

The autotest function enables complete measurement routines to be started at a keystroke.

Test capabilities

To test mobile phones, the CMD simulates a GSM base station. Two RF synthesizers, one of which delivers a continuous BCCH signal, are available for this purpose. The major test functions are:

- mobile-to-base station synchronization
- location update
- incoming call setup
- outgoing call setup
- mobile power level control
- handover (channel change, time-slot change)
- dual-band handover
- peak power measurement
- SACCH measurement (eg RxLev, RxQual, power level)
- echo test
- call clearing by mobile
- call clearing by network
- DC current/voltage measurement
- phase and frequency error measurement (option CMD-B4)
- measurement of power ramp as a function of time (option CMD-B4)
- bit-error rate (BER) measurement (option CMD-B4)
